li	brar	y(lattice) y(carData) Salaries")																							

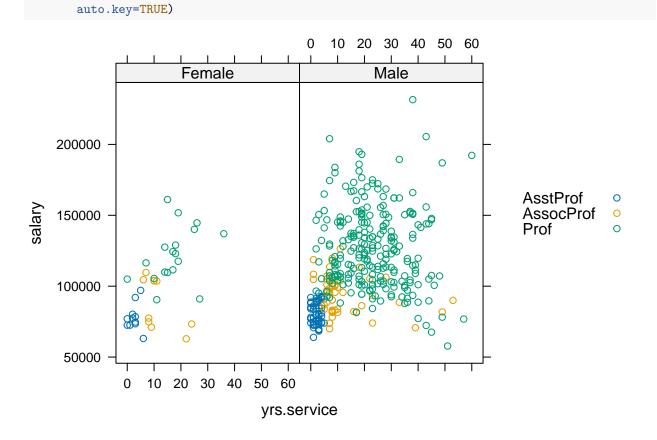

1.1 zadanie 1

a)

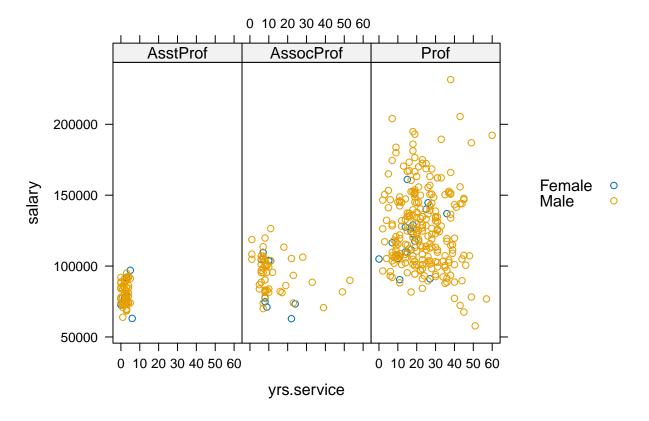

```
xyplot(salary ~ yrs.service, groups= rank, data=Salaries, auto.key=TRUE)
```

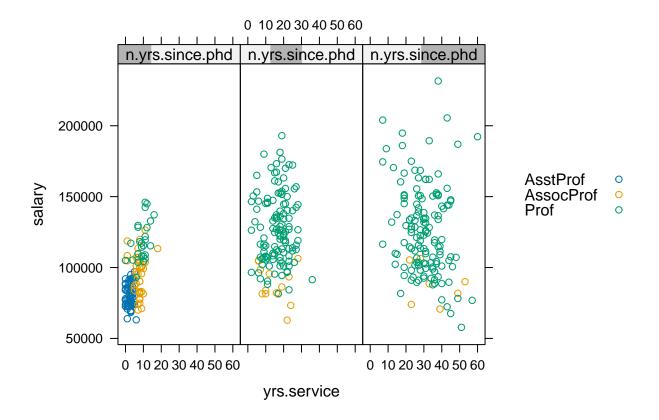

xyplot(salary ~ yrs.service| sex, groups= rank, data=Salaries,

c)

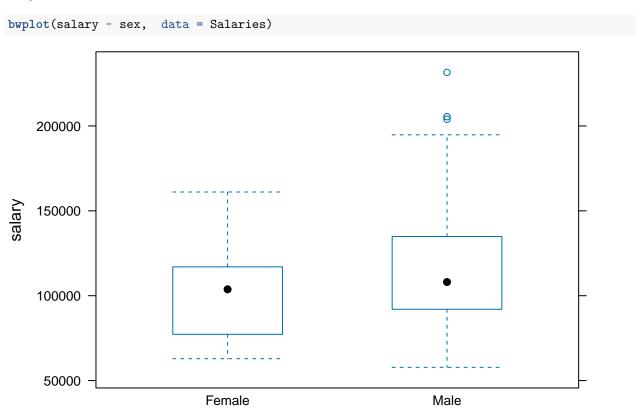

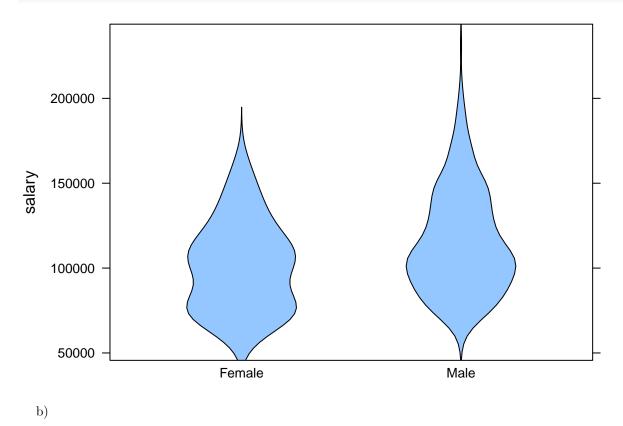

d)

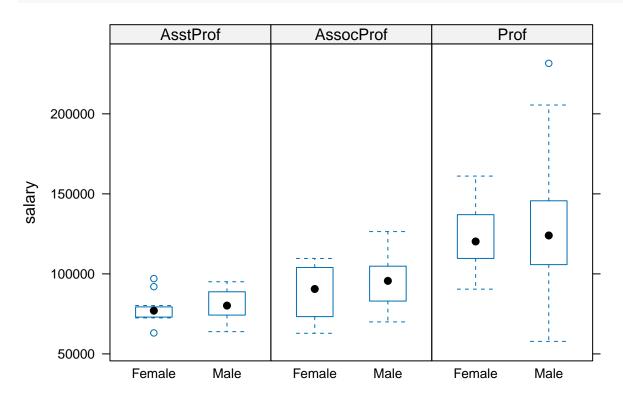

1.2 zadanie 2

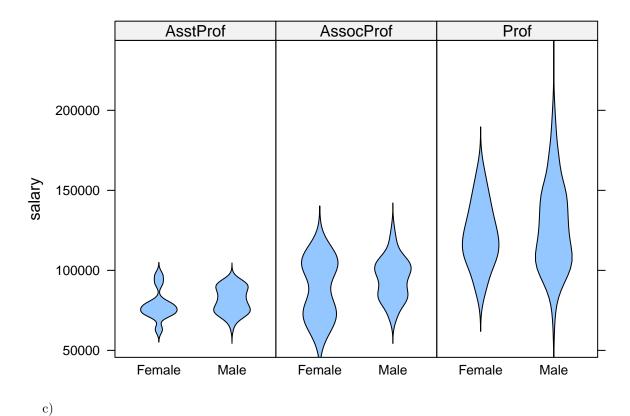

a)

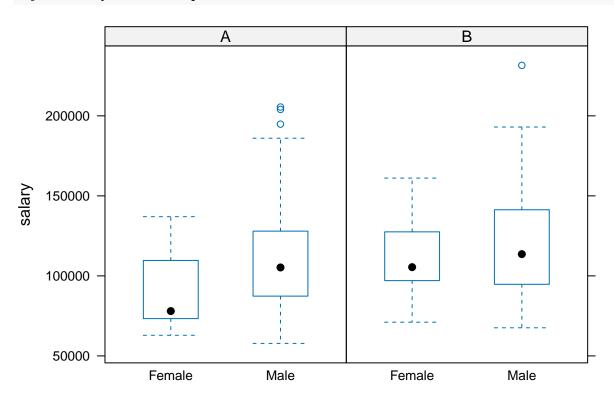

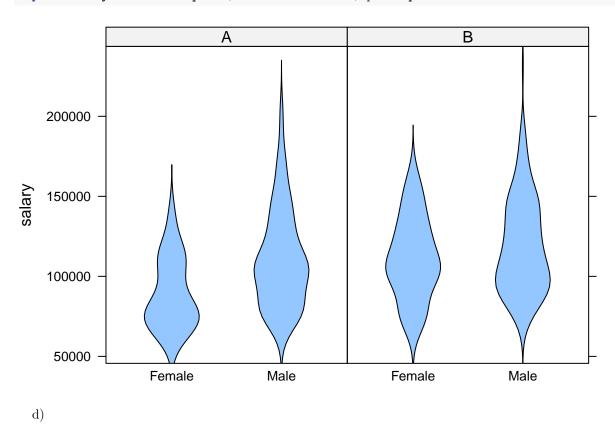

bwplot(salary ~ sex rank, data = Salaries)

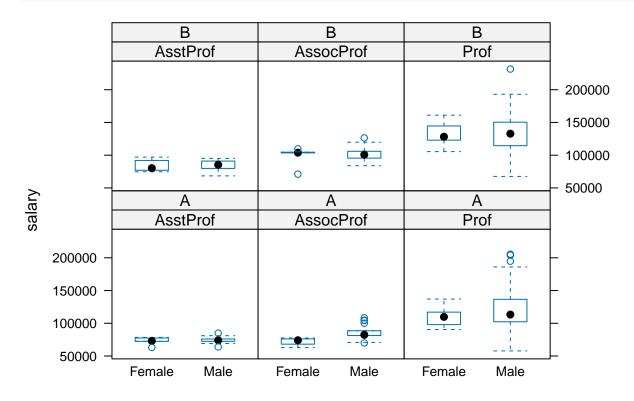

bwplot(salary ~ sex|discipline, data = Salaries)

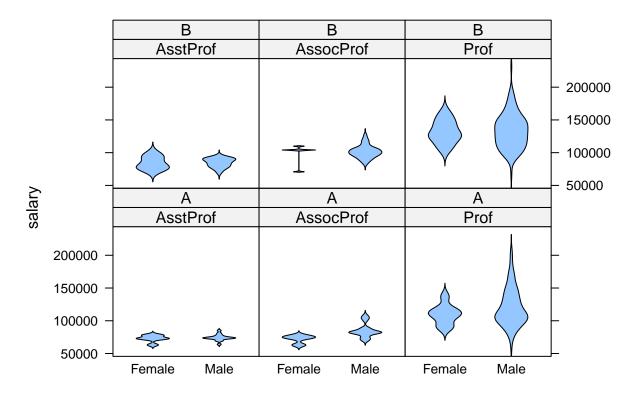

bwplot(salary ~ sex|rank+discipline , data = Salaries)

bwplot(salary ~ sex|rank+discipline , data = Salaries, panel=panel.violin)

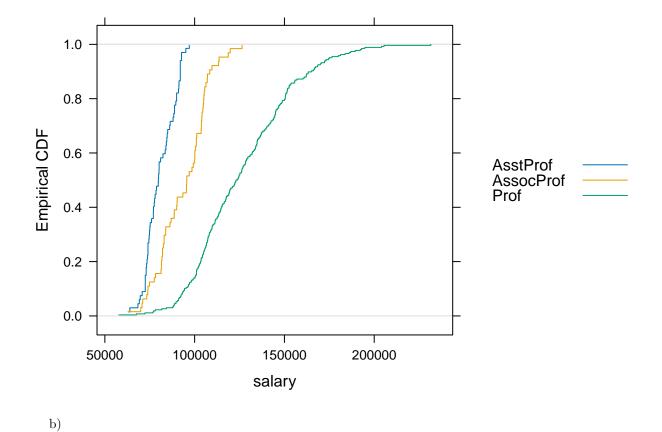

1.3 zadanie 3

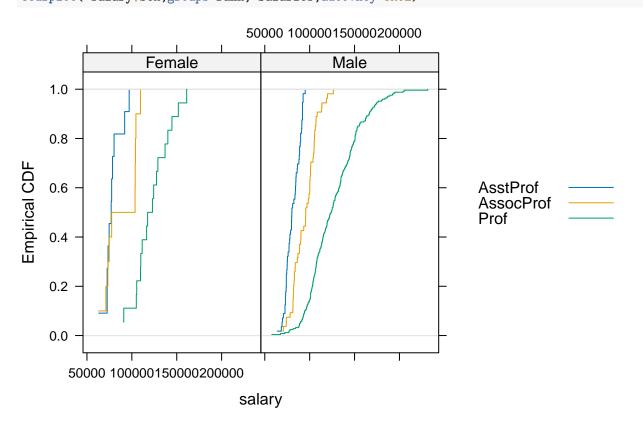

library(latticeExtra)

a)

ecdfplot(~salary,groups=rank, Salaries,auto.key=TRUE)

ecdfplot(~salary|sex,groups=rank, Salaries,auto.key=TRUE)

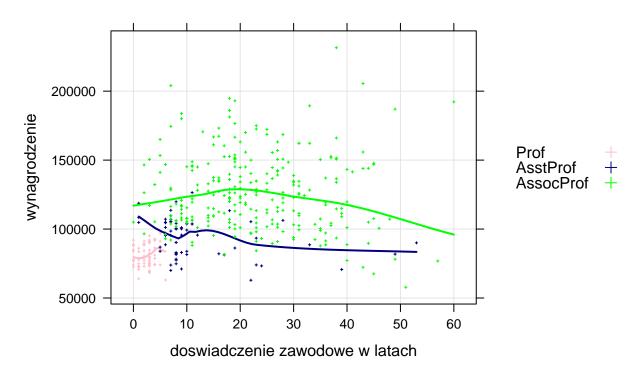

2 Sekcja 3

2.1 zadanie 1

```
library(lattice)
library(carData)
data("Salaries")
```

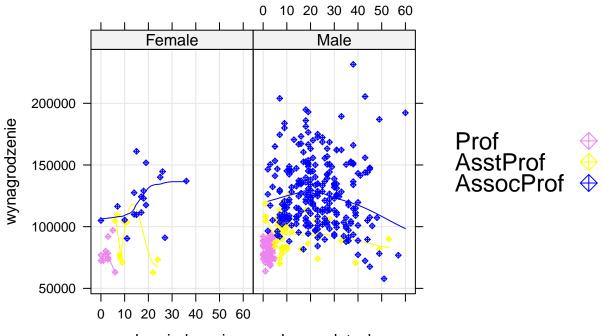

a)

Doswiadczenie zawodowe w latach w zaleznosci od wynagrodzenia z podzialem na stanowisko

b)

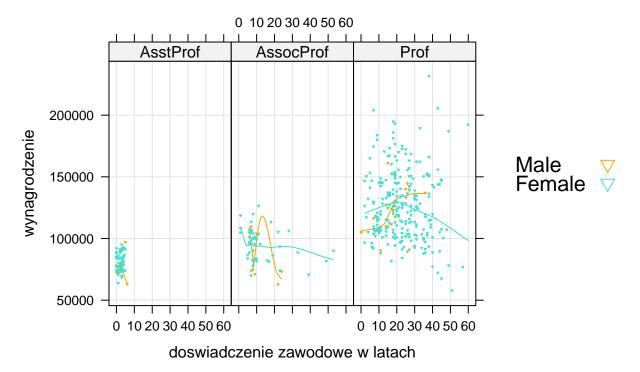

```
xyplot(salary ~ yrs.service| sex, groups= rank, data=Salaries,
key=list(text = list(as.character(unique(Salaries$rank))),
points = list(pch =9, col = c("violet", "yellow", "blue")), cex=1.5, space="right"),
```

doswiadczenie zawodowe w latach

c)

```
xyplot(salary ~ yrs.service|rank, groups= sex, data=Salaries,
key=list(text = list(as.character(unique(Salaries$sex))),
points = list(pch =6, col = c("orange", "turquoise")), cex=1.3, space="right"),
col=c("orange", "turquoise"), pch=6, cex=0.2,
xlab="doświadczenie zawodowe w latach", ylab="wynagrodzenie",
main="Doświadczenie zawodowe w latach
w zależności od wynagrodzenia z podziałem na płeć i stanowisko",
type = c("p", "g", "smooth"))
```

d)

```
Salaries$n.yrs.since.phd<-equal.count(Salaries$yrs.since.phd, 3, overlap=0)

xyplot(salary ~ yrs.service|n.yrs.since.phd, groups= rank, data=Salaries,

key=list(text = list(as.character(unique(Salaries$rank))),

points = list(pch =98, col = c("red","khaki","purple")), cex=0.8, space="right"), pch=98,

col=c("red","khaki","purple"),cex=0.5,

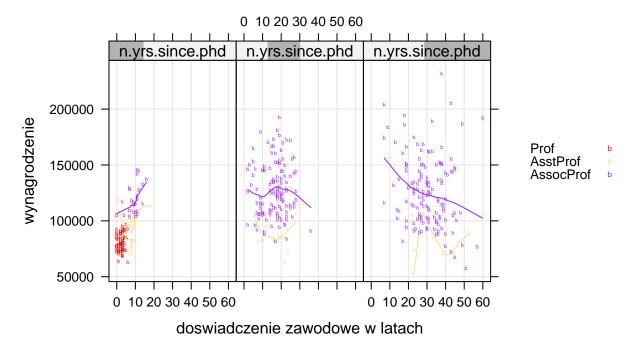

xlab="doświadczenie zawodowe w latach", ylab="wynagrodzenie",type = c("p","g","smooth"),

main="Doświadczenie zawodowe w latach

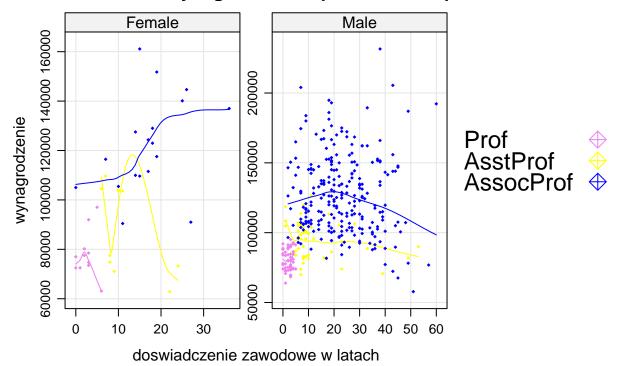

w zależności od wynagrodzenia

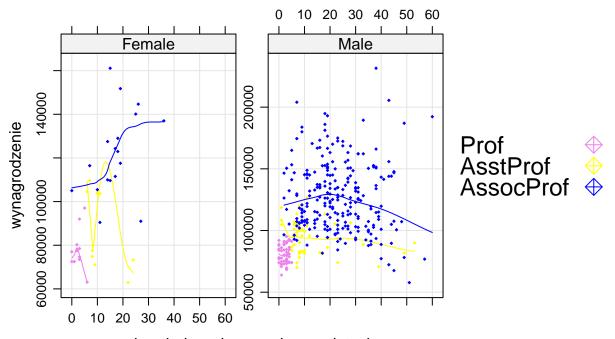

z podziałem na lata od uzyskania tytułu doktora")
```

Doswiadczenie zawodowe w latach w zaleznosci od wynagrodzenia z podzialem na lata od uzyskania tytulu doktora

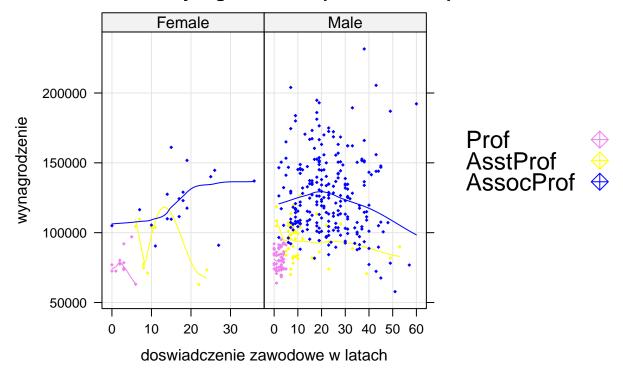

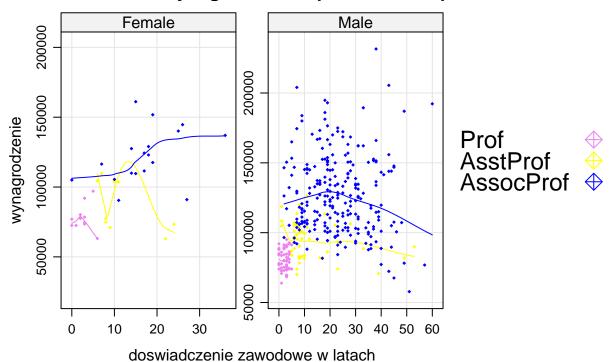

2.2 zadanie 2

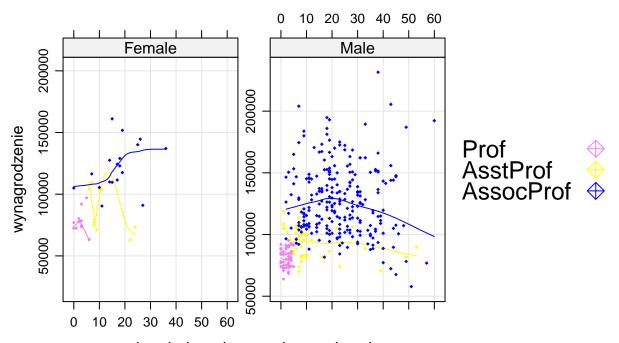

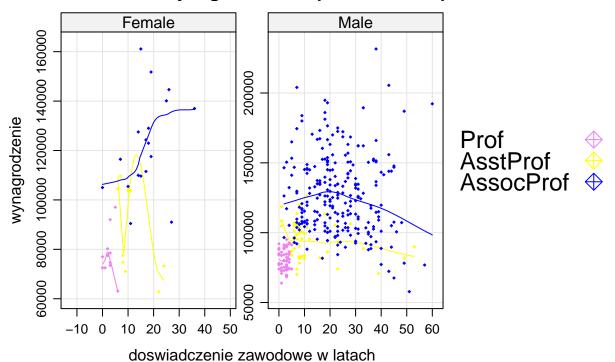

doswiadczenie zawodowe w latach

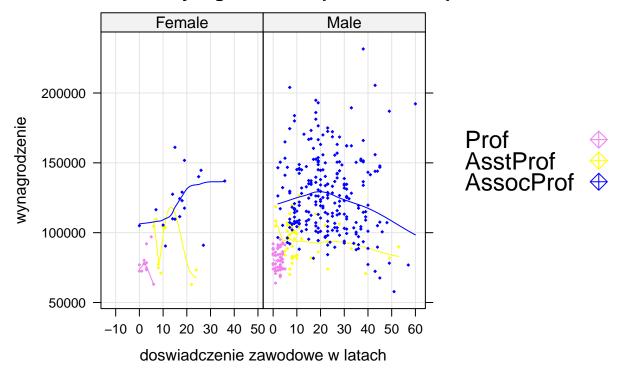

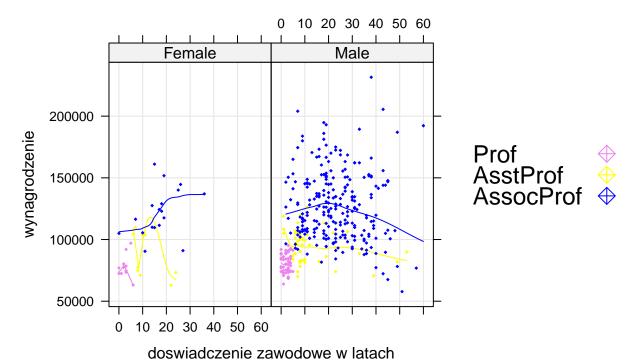

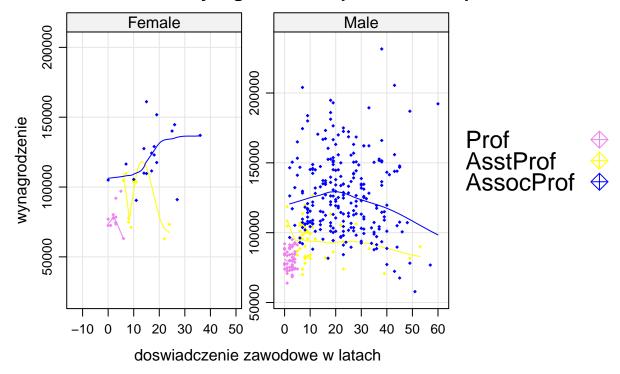

doswiadczenie zawodowe w latach

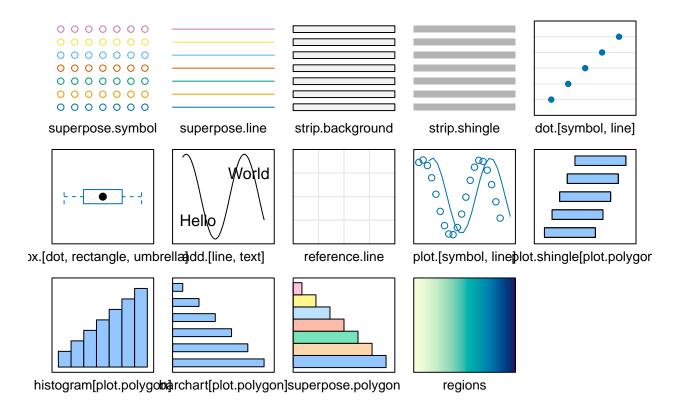

Najbardziej odpowiednie wydają się opcje x="free" i y"="same" oraz x="same" i y="same", ponieważ skala taka jest przejrzysta i ułatwia porównywanie, analize wykresów.

2.3 zadanie 3

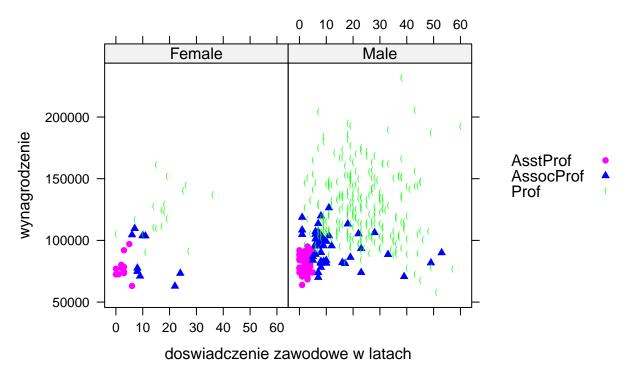

show.settings()

trellis.par.get("plot.symbol")
